## I. Introduction

This report provides a systematized view of the statistics on assets and liabilities of the Central Government, the Central Bank and Government Companies. The figures correspond to the 12 months of each year from 1992 to 2008, and for 2009 correspond to provisional statistics of the second quarter.

This information is the result of a joint effort of different institutions. For the Central Government, the sources are the Comptroller General of the Republic (CGR), the Treasury Service (TS) and the Budget Office (Dipres). The Central Bank has collaborated closely with the ministry in providing figures on its financial assets and liabilities in the format required for this report. As of 2002, the Central Bank began to include in the notes to its balance sheets the details necessary to reconstruct the figures that are presented in this report. The information on government companies was obtained from the audited financial statements, while data on guaranteed debt of the rest of the public sector was provided by the Treasury Service. Statistics on recognition bonds were provided by the Social Security Normalization Institute (INP).

## II. Description

## II.1. Net Debt of the Central Government

At the end of June 2009, the gross debt of the Central Government totaled Ps. 4,295,707 million, equal to $4.9 \%$ of GDP, a nominal reduction of Ps. 318,791 million compared with December 2008. Investments in financial assets totaled Ps. 17,257,837 million in the same period, equal to $19.9 \%$ of GDP, a drop of 5.8\% of GDP compared to December 2008.

The reduction in financial assets resulted in a decrease in the net creditor position of the Central Government, which fell from 20.4\% to 14.9\% of GDP between December 2008 and June 2009.

It is important to highlight that the Central Government registered a deficit equal to $2.6 \%$ of GDP during the first semester of 2009.

This deficit was the result of a decline in income due to the fall of copper price, the contraction of economic activity, and the cost of tax measures (fiscal stimulus plan and others). In turn, the increase of expenses corresponded mainly to goods and services production, personnel expense, and the increment in subsidies and donations by the payment of a special bond and the extraordinary contribution to the Municipal Common Fund, both part of the fiscal stimulus plan.

Nonetheless, taking into account the difficult economic situation, it is important to highlight that Chile was able to increase its public expense while reducing, at the same time, its public debt by paying off part of the external and internal debt.

## II.2. Net Debt of the Central Bank of Chile

The Central Bank of Chile liabilities were equal to $14.0 \%$ of GDP as of June 2009, 0.2 percentage points lower than December 2008. Central Bank assets were equal to $15.7 \%$ of GDP as of June 2009, a drop of 2.0 percentage points in comparison to December 2008.

The Central Bank recorded net liabilities of -Ps. 1,508,491 million as of June 2009 as informed in this report, going from a net surplus equal to $3.5 \%$ to $1.7 \%$ of GDP at the end of 2008 to June 2009.

## II.3. Consolidated Results

The consolidated gross debt of the Central Government and the Central Bank of Chile was equal to $18.7 \%$ of GDP as of June 2009, 0.5 percentage points lower than it was at the end of 2008 . The consolidated net creditor position as of June 2009 was equal to $16.7 \%$ of GDP, a decrease of Ps. 6,729,714 million compared to the close of 2008.

## II.4. Amortization Profile

The amortizations of consolidated debt of the Central Government and Central Bank have been decreasing. The payments for 2009 will be Ps. $2,558,828$ million, $99 \%$ of which corresponds to Central Bank debt. From 2009 to 2011, amortization maturities will average Ps. 1,434,737 million,
with Central Bank debt accounting for $95 \%$ of the total. Debt maturing from 2012 to 2017 should average Ps. 918,937 million a year, $26 \%$ corresponding to Central Government debt. After 2017, Government debt represents $60 \%$ of the total.

Amortizations in 2009 according to maturity and denomination include: $81 \%$ in peso-denominated debt, $18 \%$ inflation link instrument (UF: Unidades de Fomento), and $1 \%$ indexed debt or debt payable in dollars.

For the remaining periods analyzed, the predominance of local currency debt held relatively stable even though the share of amortizations in inflation link instrument debt rose.

Amortizations maturing between 2009 and 2011 on average represent $96 \%$ of local currency or inflation adjusted currency debt. This figure is expected to reduce to an average of $87 \%$ for the 2012-2017 period.

## II.5. Government Companies and Recognition Bonds

This report includes complementary information on the financial assets and liabilities of government companies, and on the stock of outstanding recognition bonds. These liabilities, assets and debt are different in nature from what is considered public debt, and in keeping with standard international practices, they are presented separately and are not consolidated with the statistics on the Central Government and Central Bank. In this manner, it supplements and enriches the available information without distorting it and facilitates international comparisons related to public indebtedness.

When debt indicators are relatively low, which is the case for a great majority of government companies, their indebtedness consists of liabilities that have been assumed based on the capital of each corporation. These liabilities are backed by investment projects under way that must be financed by future operating revenues without compromising public credit, except for debt under government guarantee, which is identified separately.

As of June 2009, Government Companies recorded a reduction in their liabilities. The gross debt of Government Companies was equal to $6.7 \%$ of GDP (Ps. 5,849,300 million), 0.2 percentage points lower than compared with December 2008. At the same time, financial assets decrease Ps. 49,225 million amounting to $0.6 \%$ of the GDP. The net debt of these companies was equal to $6.2 \%$ of the GDP.

In exceptional cases, when financial assets were not enough to guarantee the debt of government companies at a reasonable cost, the government has stepped in to guarantee part of the debt. Guaranteed debt for government companies has remained relatively stable, equaling $2.0 \%$ of GDP as of June 2009, or Ps. 1,784,499 million, with $35 \%$ pertaining to Empresa de Ferrocarriles del Estado (the National Railroad Company), and 41\% to Metro (the National Subway Company). 81\% of this debt was issued locally and $19 \%$ in the external market.

Finally, recognition bonds represent a government liability owed to affiliates of the old pension system who changed to the new pension fund system (AFPs). Although this liability is of a different nature, future payments will be required and must be considered. As of July 2009 the stock of recognition bonds was equal to $7.9 \%$ of the GDP, in line with the downward trend that begun in 1985 and projected to continue over the coming years (see Appendix 4).

(1) Excluding government promissory notes with the Central Bank and Treasury Bonds held by Corfo.
(2) Excluding issues of the Central Bank held by the Treasury and Corfo (see Annex N ${ }^{\circ}$ 2) Source: the Central Bank and the Ministry of Finance

## APPENDIX 1

## Assets and Liabilities of the Central Government

## a. Explanation of figures

## Liabilities

Central Government debt is comprised of domestic and foreign debt of the Treasury Service and Corfo. The figures presented in this report are based on data from the Budget Office (Dipres) and the Treasury Service that have been harmonized to satisfy the requirements of this report.

Local currency debt is domestic debt of the Central Government and the Central Bank, the stock of papers in UF and pesos issued on the domestic market (BTU and BTP), and the domestic debt assumed by Corfo.

## Foreign currency debt

- Domestic debt: Debt owed by the Treasury Service to the Central Bank.
- Foreign debt: Debt of the Treasury Service and Corfo issued abroad in local and foreign currency, provided by Dipres. The figures differ from the foreign debt figures of the Central Government presented by the Central Bank in its two-week reports, mainly because the Central Bank does not include bonds issued by residents and held by nationals.

## Assets

Local currency assets excluding government companies: Figures provided by the Comptroller General, presented in the Public Sector Equity Statements under the items local currency in cash, investments and placements in local currency in deposits, promissory notes, stocks and other securities and instruments; and loans in local currency, excluding loans to other government agencies and other loans.

Financial debt of government companies with the government: The financial debt of government companies obtained from their balance sheets and excluding income tax and deferred taxes.

Foreign currency assets: Cash in foreign currency investments and placements in foreign currency in deposits, including the Economic and Social Stabilization Fund (ESSF), the Pension Reserve Fund (PRF) and the Oil Price Stabilization Fund (OPSF); and loans in foreign currency to employees. Placements in foreign currency-denominated stocks are excluded because they correspond to shares of the government in international agencies that are permanent in nature.

## APPENDIX 2

## Assets, Liabilities and Amortizations of the Central Bank of Chile

The information on assets and liabilities of the Central Bank of Chile are figures published in the balance sheets of the Central Bank of Chile, although the classification criteria may differ. However, starting with publication of the balance sheet of December 2002, the Central Bank of Chile disclosed details to allow the replication of the figures presented in this report. ${ }^{1}$

Below is a description of the contents of each item in this publication as well as the nature of the information on the amortization schedule.

## Liabilities

Notes issued by the Central Bank: Corresponds to the amount of notes, excluding interest and advance discounting. Bills issued for the purchase of overdue portfolio from banks (1989-1996) are also excluded.

Fiscal deposits in local and foreign currency: Includes deposits in the OPSF, funds for special international agency programs, the Infrastructure Fund and other deposits by the government. The assets from credits financed by international agencies are deducted from deposits in local currency. ${ }^{2}$

Other: The sum of other deposits and obligations, plus amounts in other liability accounts, plus the purchase of dollars under a net resale agreement (if the net balance is a liability), plus swaps and other foreign liabilities, excluding DEG allocations.

[^0]GOBIERNODE CHILE

## Assets:

Reserve Assets: In order to homologate the series through 2001, it includes reserve assets plus interest collectible abroad, less reserve liabilities, excluding from the latter liabilities under swaps. This concept was added as of 2002 to the book measurement of reserve assets.

Fiscal notes in local and foreign currency: This corresponds to notes that originated from fiscal transfers to the Central Bank under Laws 18,267 and 18,768 . Prepayments of interest or principal are deducted from notes in dollars.

Other: This corresponds to the sum of credits to commercial banks plus the credit to Banco Estado, plus the credit to government companies, excluding credits to Corfo associated with popular capitalism (Law 18,401) and credit facilities using Treasury Service funded from international agencies; plus credit to other institutions, excluding the Central Savings and Loan Fund and the National Savings and Loan Association; plus contributions to International Agencies; plus other amounts in other assets abroad; plus other amounts in other asset accounts, excluding deferred loss, interest and advance discounting; plus the purchase of dollars under a net resale agreement (if the net balance is an asset).

Subordinated Debt: ${ }^{3}$ For greater transparency, the amount of subordinated debt is presented even though it is not considered an asset of the Central Bank. Associated liabilities are subtracted (bills issued for the purchase of portfolio and subordinated debt provisions) and adjusted retroactively from 1989 to 1997 because of the deferred loss.

[^1]
## Amortizations.

The amortization program only includes notes on the over-the-counter market. The combined balance is equal to more than $99 \%$ of the total. The figures have been obtained from scheduled maturities that include principal and interest so the component of interest to be deducted had to be defined. In the case of notes with coupons, the amount of the respective coupon payment considered as interest has been considered as such, and for instruments that are redeemed with a single payment, the original issue discount has been considered as interest.

The scheduled amortizations exclude interest accrued and not yet serviced, which forms part of the scheduled payments considered to be interest. Moreover, the scheduled payments of principal on notes with coupons do not include the premium or discount balances at which the instruments were placed because coupon rates were used instead of historic placement rates.

## APPENDIX 4

## Recognition Bonds

Recognition bonds are an obligation of the Chilean State owed to future pensioners, which will come due as they retire. This financial instrument therefore makes explicit the debt owed to workers who formerly contributed into the old social security system.

These obligations are not conceptually different from other social security obligations in other countries. The practical difference is that in most countries, these obligations are accumulated as future spending commitments through a social security system, that are not recorded in the accounting. This is what has been commonly called the implicit social security debt of nations.

Virtually no country, either developed or developing, records social security commitments or implicit social security debt as part of the public debt.

The Recognition Bond is calculated as the necessary principal for the affiliate, who changed over from the old system, to receive a pension equal to $80 \%$ of the pensionable salary earned between September 1978 and 1979, save exceptions, multiplied by the proportion of his or her active life during which he paid into the old system. This amount is compounded at a real rate of $4 \%$ annually from the time of the change to the new pension system.

When the beneficiaries meet the requirements for retirement, the bonds are redeemed by the Pension Fund Managers (AFP). The Government, through the Social Security Normalization Institute (INP), transfers a lump sum that is recorded as below-the-line financing in the new presentation of the fiscal figures of the Central Government. This redeemed bond is added to the affiliate's individual capitalization fund and used to create a future pension flow in any of the possible modalities.

The number of bonds issued and redeemed from 1982 to July 2009 is presented in the table below. The stock has decreased over time as a percentage of GDP.

## Recognition Bonds <br> Redeemed and outstanding bonds

|  | $\mathrm{N}^{\circ}$ of bonds redeemed | Outstanding bonds <br> Current amounts (a) |  |
| :---: | :---: | :---: | :---: |
|  |  | MM Ps. | \% GDP |
| 1982 | 371 | 488,454 | 41.4\% |
| 1983 | 3,229 | 637,962 | 42.5\% |
| 1984 | 4,324 | 817,449 | 44.1\% |
| 1985 | 4,599 | 1,082,006 | 40.7\% |
| 1986 | 6,439 | 1,330,766 | 38.9\% |
| 1987 | 8,442 | 1,691,879 | 36.9\% |
| 1988 | 9,365 | 1,939,343 | 32.1\% |
| 1989 | 9,994 | 2,420,769 | 31.9\% |
| 1990 | 11,424 | 3,222,179 | 33.5\% |
| 1991 | 10,292 | 3,918,719 | 30.8\% |
| 1992 | 12,179 | 4,595,872 | 28.5\% |
| 1993 | 15,738 | 5,261,522 | 27.3\% |
| 1994 | 16,416 | 5,825,973 | 25.1\% |
| 1995 | 18,251 | 6,390,559 | 22.6\% |
| 1996 | 18,452 | 6,878,566 | 22.0\% |
| 1997 | 19,712 | 7,344,100 | 21.2\% |
| 1998 | 22,874 | 7,657,946 | 21.0\% |
| 1999 | 25,296 | 7,795,408 | 21.0\% |
| 2000 | 28,068 | 8,062,517 | 19.9\% |
| 2001 | 30,495 | 8,142,093 | 18.7\% |
| 2002 | 28,733 | 8,217,112 | 17.7\% |
| 2003 | 33,615 | 8,047,589 | 15.7\% |
| 2004 | 37,887 | 7,910,404 | 13.6\% |
| 2005 | 39,322 | 7,780,123 | 11.8\% |
| 2006 | 42,878 | 7,385,246 | 9.5\% |
| 2007 | 44,897 | 7,123,769 | 8.3\% |
| 2008 | 49,258 | 8,051,443 | 9.1\% |
| 2009(b) | 28,577 | 6,842,384 | 7.9\% |

(a) The current value of recognition bonds is the sum of the readjusted nominal value plus capitalized interest of all bonds issued and not paid by a determined date.
(b) Figures through July 2009.

[^0]:    ${ }^{1}$ Except for the local currency/foreign currency separation in other liabilities and assets.
    ${ }^{2}$ Since the commercial risk is assumed by the Treasury Service, it was deemed appropriate to consider it a reduction in liabilities instead of an asset.

[^1]:    ${ }^{3}$ Through 1995, this was a transaction by which some commercial banks had to allocate a fraction of their surpluses to servicing, for an indeterminate period of time, debt assumed by the Central Bank because of the financial crisis in the 80's. In that year, Laws 19,396 and 19,359 were enacted that empowered banks unable to extinguish the debt in a period of 40 years to pay the debt by issuing new shares that were either listed for trading or given in payment. The difference between the book value of the debt and the market price of the shares resulted in a book loss that was deferred under such laws for absorption by subsequent surpluses.

[^2]:    (a) Includes debt of the financial and non-financial system. The guaranteed debt of privatized companies was not included
